

The Four Operations in Year 5

Addition

$$\begin{array}{r} 23.481 \\ + 1362 \\ \hline 24843 \end{array}$$

£	2	3	5	9
+	£	7	5	5
£	3	1	1	4
	1	1	1	

	1	9	0	1
		3	6	5
+		0	7	0
	2	3	3	6
	1	1		

Subtraction

Compact column method

$$\begin{array}{r} 23481 \\ - 2128 \\ \hline 28928 \end{array}$$

$$\begin{array}{r} 6796.5 \\ - 372.5 \\ \hline 6796.5 \end{array}$$

Multiplication

Step 1 - short multiplication for multiplying by 1 digit

X	300	20	7
4	1200	80	28

	H	T	U	
	3	2	7	
x			4	
	1	3	0	8

Step 2 - long multiplication for multiplying by 2-digits

X	10	8
10	100	80
3	30	24

	H	T	U
		1	8
x		1	3
		2	4
		3	0
		8	0
	1	0	0
	2	3	4

	H	T	U
		1	8
x		1	3
		5	4
	1	8	0
	2	3	4

Step 3 - moving towards more complex numbers

$$\begin{array}{r} 3652 \\ \times 8 \\ \hline 29216 \end{array}$$

$$\begin{array}{r} 1234 \\ \times 16 \\ \hline 7404 \\ 12340 \\ \hline 19744 \end{array}$$

Division

Short division

$$\begin{array}{r} 32 \\ 3 \overline{)96} \end{array}$$

$$4 \overline{)72} \begin{array}{l} 18 \\ 3 \end{array}$$

$$\begin{array}{r} 218 \\ 4 \overline{)872} \end{array}$$

$$8 \overline{)5309} \begin{array}{l} 663 \text{ r } 5 \\ 5309 \end{array}$$

Year 5 Key Maths Vocabulary

Square Number: It is a number which can be represented in the shape of a square. A number that results from multiplying an integer by itself. It is also called perfect square. EXAMPLES: 4, 9, 16, 25, 36.

Cubed number: a number raised to the third power which is indicated by a small 3 to its upper-right.

$$5 \times 5 \times 5 = 125$$

so $5^3 = 125$

Proper Fractions: A fraction smaller than one whole. The numerator is smaller than the denominator.

$$\frac{\text{numerator } 3}{\text{denominator } 5}$$

Percentage:

A percent or percentage is a fraction expressed as a number out of 100 followed by the % symbol.

$$\frac{20}{100} = 20\%$$

Diagonal

a line joining two non-adjacent vertices or corners of a polygon.

Quadrant: A quarter of a circle or its circumference or any quarter of a plane divided by an x and y axis.

Prime Number:

A number that has exactly two factors. A number that can only be divided evenly by itself and one.

EXAMPLES: 2, 3, 5, 7, 11, 13, 17, 19.

Prime Factor:

A prime factor is a prime number that divides exactly into another given number.

Improper Fraction: A fraction equivalent to or larger than one whole. The numerator is larger than or equal to the denominator.

$$\frac{\text{numerator } 5}{\text{denominator } 2}$$

Volume

amount of space occupied by an object.

Capacity:

The amount a container or something can hold.

Negative Numbers

any number less than zero. They are written with a minus sign.

Composite Numbers: A number with more than two factors.

$$16 = 1 \times 16 \quad 16 \div 1 = 16$$

$$16 = 2 \times 8 \quad 16 \div 2 = 8$$

$$16 = 4 \times 4 \quad 16 \div 4 = 4$$

16 is a composite number.
The factors of 16 are 1, 16, 2, 8, 4.

Remainder: The amount left over after dividing a number.

Remainders can be written as a whole number, decimal or a decimal fraction

$$4 \overline{) 239 \frac{1}{4}} \\ \underline{13} \\ 957$$

Mixed Number A number written as a whole number with a fraction.

Reflex angle: any angle between 180° and 360°.

Acute: Any angle smaller than 90°

Obtuse: Any angle that is between 90° and 180°

Powers of 10 the number of times a base number is multiplied by itself, indicated by a small number to its upper-right

e.g. $10^5 = 10 \times 10 \times 10 \times 10 \times 10$, read as 10 to the power of 5.

• the small number is called a power, an exponent, an index or order.

Perpendicular:

When two lines meet at right angles to the horizon or another object.
